

CHIPPER

- Dark green color
- Fine leaf blade
- Excellent disease resistance
- Improved drought tolerance
- Improved heat tolerance

Entered into the latest National Trials (NTEP), **Chipper** has exhibited excellent performance in every region of the country, including the Northeast, Midwest, the Transition Zone and the Southeast.

Chipper has excellent turf density, a very dark green genetic color, a very fine leaf texture, and excellent disease resistance.

Chipper had one of the best ratings for resistance to Brown Patch in the latest NTEP.

This low maintenance turfgrass also exhibited excellent wearability in NTEP's Traffic Stress trials.

Chipper is well adapted to a wide range of climatic conditions including full sun, partial shade, heat, drought and high humidity.
