

EXCEL LADINO CLOVER

- Superior yield
- Increased forage quality
- Excellent regrowth following grazing or cutting
- Increased seed production
- Improved winterhardiness
- Large, nutritious leaves
- Great for wildlife food plots

Developed in Australia, Excel Ladino Clover with its large, highly nutritious leaves, is excellent for pastures or hay. Excel Ladino Clover is persistent in hot climates and is well adapted to Mediterranean and sub-tropical type environments. Excel Ladino Clover is more winter active than most ladino varieties, providing extended winter grazing in areas receiving moderate frosts. This variety also has excellent seed production allowing it to perform extremely well in grazing systems and wildlife food plots where natural re-seeding is practiced.

Management Recommendations

Planting Rate: 2-4 Pounds/Acre
Seeding Dates: Spring: February- April
Fall: September-November
Minimum pH: 6.0
Primary Use: Pasture/Hay
