

SUMMIT TIMOTHY

- Superior for hay or grazing
- Early maturity
- Great palatability
- Perfect for pure stands or with legumes and other grasses
- Improved summer regrowth
- Excellent spring vigor
- Superior leafiness
- Very winterhardy

Summit is a new early-type timothy with maturity similar to Clair and 10 days earlier than Climax. Summit was bred for higher yields, faster spring green up and better summer regrowth. Summit is ideally suited for pasture mixes, especially when used with alfalfa. Summit can tolerate moderate continuous grazing, but does best under rotational grazing. Summit is the hay and pasture grass of choice for horse owners and others who demand high quality forage.

SUMMIT TIMOTHY DRY MATTER YIELDS

Variety	Total % Yield*	Loc./Yrs.*
Summit	105.1	27
Clair	102.8	29
Cimax	91.8	29
