## TURF BERMUDAGRASS BLEND

turf science  
genetics®

- Blend of improved NTEP varieties
- Improved color, leaf texture, density and uniformity
- Excellent cold tolerance
- Superior heat and drought tolerance
- Extremely durable and wear resistant
- ALL-VANTAGE® Seed Coating with AquaBond & Nutri-Start

SunSpot is a blend of proprietary turf-type bermudagrass varieties developed for turf applications including residential/commercial lawns, sport turf, reclamation/erosion control and recreation areas. Key characteristics are superior heat and drought tolerance, extreme durability and wear tolerance, excellent cold tolerance and improved color, leaf texture, density and uniformity. SunSpot offers a quality alternative to vegetative varieties that are costly and time consuming to establish. SunSpot is adapted to most areas of climatic zones 6, 7, 8, 9, 10, 11 and will grow in a wide range of soil types and soil pH. Optimum soil pH is 5.5 to 7.0.

SunSpot will do best on well-drained soils in areas that receive full sunlight. SunSpot should be planted in a firm seedbed at a depth of 1/8 to 1/4 inch, when soil temperatures are consistently above 65 degrees F. Good soil moisture needs to be maintained during establishment with frequent but light irrigation. Seedlings should start to emerge in 10 to 21 days with full coverage attained in 4 to 6 weeks under optimum conditions. As seedlings develop, decrease irrigation frequency but increase the amount of water applied. Follow recommended, regional watering guidelines as turf matures. Mowing can begin when the grass is 1/3 taller than the desired mowing height. To maintain a healthy bermudagrass lawn, try not to remove more than 1/3 of the leaf blade per mowing. In areas where winter injury is a concern, planting should be done 60-90 days before first frost.

Dormant bermudagrass can be overseeded with a cool season grass such as Chipmate Perennial Ryegrass Blend for year-round green color. Overseeding is not recommended on new turf less than 6 to 8 months old.

### Product Specifications:

Seeding rates:

- New turf 2-3 lbs./1000 sq. ft.
- Renovation 0.5-1.5 lb./1000 sq. ft.

Mowing Height:

- Low Maintenance (lawns): 1-2 inches
- High Maintenance (golf course/sports turf): 0.4-1 inches

Optimum Soil Conditions:

- Soil: well-drained
- pH: 5.5-7.0

Climate zones: 6, 7, 8, 9, 10, 11

Available in:

- 3 lb. bags
- 10 lb. bags
- 25 lb. bags
